OBJECTIVE

Experienced Software Developer with 3+ years of expertise in building large-scale enterprise systems for government and commercial clients. Proven track record in developing automated payroll systems processing 30,000+ employee records, HRMS platforms, and payment gateway integrations. Specialized in full-stack development, API design, database optimization, and delivering scalable solutions that drive operational efficiency. Adept at working with legacy systems, managing complex data migrations, and implementing business intelligence dashboards.

SKILLS

- **Languages & Frameworks**
 - PHP (Laravel/Codeigniter)
 - Python (Django)
 - HTML/CSS/Javascript
 - Wordpress Development
 - Cordova
 - Flutter
- **Backend & API Development**
 - RESTful and GraphQL API Design & Integration
 - Authentication & Authorization
 - Payment Gateway Integration
 - Data Validation & Business Logic
 - Background Jobs & Queues
- **Databases & Data Engineering**
 - MySQL
 - Database Design & Normalization
 - Data Validation, Deduplication & Revalidation
 - Query Optimization & Indexing
- **DevOps & Tools**
 - Git & GitHub
 - CI/CD Pipelines
 - Linux Server Administration
 - Cron Jobs & Server-Side Processing
 - Web Server Configuration
- **Enterprise Systems & Domains**
 - Payroll Systems
 - HRMS & ERP Platforms
 - Government Information Systems
 - Business Intelligence Dashboards

EXPERIENCE

Software Developer | Havosoft

JUNE 2025 — PRESENT

- Designed and implemented **automated payroll systems** covering salary generation, deductions, bonuses, validations, reconciliation, and payslip generation.
- Integrated **payment gateways (Flutterwave, Sayswitch)** to enable secure individual and bulk salary disbursement with real-time verification and status tracking.
- Developed and maintained **HRMS modules** including staff records, promotions, attendance, validation workflows, analytics dashboards, and self-service portals.
- Implemented **audit logs, activity tracking, and validation reports** to support compliance and accountability in government systems.
- Built RESTful API endpoints for enterprise systems integration enabling seamless data exchange between systems.
- Designed interactive BI dashboards for sales displaying leads management, deals pipeline, sales KPIs, activity tracking, and performance metrics.
- Implemented comprehensive analytics for HRMS tracking staff demographics, retirement forecasts, department distribution, and incomplete records.
- Metadata Identity Verification service: Built an identity verification service with wallet system, API key management, bank identity pre-check, rate limiting & usage logging.
- Unity Hub (SSO + Ops): Built centralized Single Sign-On/Logout across all subsidiary ERPs and WordPress apps; implemented Operations Monitoring module consolidating leads, deals, invoices, proposals, and announcements across all entities in real-time.
- CDR Intelligence System: Built person-centric Call Detail Record platform with subject dossiers, multi-identifier tracking, temporal signal history, spatial map analysis & external REST API with Swagger docs and Laravel Sanctum auth.
- Set up CI/CD processes and deployed multiple production systems to various hosting environments.

IT Professional/ Backend Developer | Freelance

OCTOBER 2022 — MAY 2025

- Designed and developed **backend-driven web applications** for clients, including secure financial and investment platforms, implemented queued/background processing to ensure **data consistency and scalability under load**.
- Built REST APIs using **Laravel**, implementing authentication, transaction processing, and database-driven business logic.
- Diagnosed and resolved hardware, software, and network issues for 20+ clients with 95% first-call resolution rate.
- Performed software installation, configuration, and updates for Windows and Linux environments.
- Set up and configured network printers, scanners, and peripheral devices with driver optimization.
- Provided remote and on-site technical support ensuring minimal downtime for client operations.
- Implemented multiple undergraduate project systems including full-stack web applications with MySQL databases and responsive frontends.

- Delivered custom software solutions for small businesses including inventory management and client relationship systems.

Computer Operator / IT Support | Apo Cyber Cafe

NOVEMBER 2020 – JULY 2022

Responsibilities:

- Operated computer systems and performed preventive maintenance on hardware and IT equipment.
- Conducted data entry operations using Microsoft Office Suite (Word, Excel, PowerPoint, Access).
- Provided computer literacy training to students covering basic operations, internet usage, and office applications.
- Monitored system performance and resolved technical issues to ensure optimal uptime.
- Installed and configured operating systems, application software, and printer drivers.

KEY ACHIEVEMENTS

- **Built and deployed production HRMS** for Kano State Ministry of Local Government and Chieftaincy Affairs with modules for recruitment, promotions, attendance, staff validation, and self-service portals.
- **Developed business intelligence dashboards** providing real-time analytics for payroll, sales performance, asset management, and HR decision-making.
- **Havosoft Unity Hub (Multi-ERP Platform)** Centralized SSO/SLO, Operations Monitoring (consolidated financials, announcements), and BI dashboards across all subsidiary companies.
- **CDR Intelligence System:** Subject-centric investigative tool with multi-number tracking, temporal CDR history, spatial analysis maps & REST API (Swagger + Sanctum).
- **Metadata identity verification service:** with wallet, API key management, payment integration & usage analytics.

EDUCATION

BSC COMPUTER SCIENCE | UNIVERSITY OF CALABAR, CALABAR

2024
